## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farnworth (US 2004/0104473) and in view of Matsushima (US 6,232,652.)

In regard to claim 1, in fig. 1F, Farnworth discloses a method for packaging semiconductor device, comprising the steps of:

forming an Au bump 38 on a bond pad of a wafer 14;

dicing the wafer into a chip, fig. 1G;

attaching chip substrate to form a flip-chip bonding, fig. 3A;

encapsulating the flip-chip bonding by using a nonconductive epoxy 62, fig. 4A;

and

sawing the substrate into individual packages, figs. 3a-4a.

Farnworth, however, does not expressly disclose the step of attaching the chip using thermo-pressure process. It should be noted that this process is widely used in semiconductor packaging since the heat and pressure are used at the same time on the surface to provide a uniform surface, and it also a low cost process.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to recognize the thermal process as taught by Matsushima in order to provide a uniform surface, and it also a low cost process.

In regard to claim 2, Farnworth further discloses the Au bump connected to the substrate through an Ag layer and a Cu layer (see section [0051].
